

PATIENT INFORMED CONSENT

Dear Madam/Sir,

You have been diagnosed with Acute viral infection of upper respiratory tract, also called “respiratory infection”.

Respiratory infection is one of the most common human diseases. Various viruses, bacteria and fungi are recognized as causative agents, and viruses among them are the most frequent – in about 70% of cases. You can distinguish respiratory disease by the immediate and acute symptoms: nasal discharge, nasal congestion, sore throat, cough, headache, fever, fatigue and tiredness.

Purpose of this clinical study

Your doctor has invited you to take part in a study, which aims to assess the effectiveness of a drug that boosts health and the normal function of the upper respiratory tract.

The undersigned:

.....
patient's name

I carefully read all provided information and my questions were answered to my satisfaction. I give my consent to take part and comply with the instructions, given to me by the study doctor.

I will not change intentionally or under other suggestion the therapeutic regimen and the type of the assigned medication.
