considering!**

How to find out more?

Scan the QR codes to:

- Register your interest with your contact details (phone number and email)
- One of our research team members will contact you

REGISTRATION FORM

What does the study involve?

- Complete a short online questionnaire before surgery.
- Wear a small band on your forearm that will measure heart rate for 5 - 10 minutes.
- Give blood samples (1 tsp).
- There are no additional hospital visits needed.

Why are we doing this research?

We are trying to understand how the nervous system affects recovery after surgery. This research will help to identify patients who can benefit from treatments to get back home quicker.

Are you aged 50 or over and scheduled for surgery?

If yes, you may be able to take part

We're inviting you to take part in a study to explore how the regulation of the nervous system, like heart rate and digestion, might affect recovery after surgery.

**Critical Care and
Perioperative Medicine
Research Group (CCPMG)**

ABOUT US

We are a research team from Queen Mary University of London (QMUL) working with doctors and nurses in the National Health Service (NHS)
