| 3+  | 3 (25%)                                 | 6 (46%)  | 6 (50%)                   |

\* Median and inter-quartile range for continuous data, number and percentage for categorical data.

FEV1: Forced expiratory volume in the first second.

BSI: Bronchiectasis Severity Index.

## Outcome measures

**Primary endpoint: Change from baseline (day 1) in *P. aeruginosa* bacterial burden in sputum at week 12 (day 84), assessed by quantitative sputum cultures (colony-forming units (CFU)). All data are  $\log_{10}$ -transformed.**

|  | Treatment arm                                       |   |                                       |
|--|---|---|---------------------------------------|
|  | Gremubamab 1500mg                                   | Gremubamab 500mg                                      | Placebo                               |
| <b>Baseline (Day 1)*\$</b>   | 7.16 (1.53)<br>[n=12; 1 below LLoD]                 | 8.56 (0.76)<br>[n=13; all above LLoD]                 | 7.55 (1.76)<br>[n=12; all above LLoD] |
| <b>Week 12 (Day 84)*\$</b>   | 6.93 (1.70)<br>[n=12; 1 below LLoD]                 | 7.02 (2.08)<br>[n=13; 2 below LLoD]                   | 7.72 (2.05)<br>[n=12; 1 below LLoD]   |
| <b>Change from baseline*\$</b>   | -0.23 (2.13)<br>[n=12]                              | -1.54 (1.94)<br>[n=13]                                | 0.18 (1.85)<br>[n=12]                 |
| <b>Main analysis: Adjusted mean difference in change from baseline vs Placebo†\$</b>       | -0.66<br>95% CI: (-1.71, 0.39)<br>1-sided p = 0.208 | -1.25<br>95% CI: (-2.33, -0.16)<br>1-sided p = 0.0710 | NA                                    |
| <b>Sensitivity analysis: Adjusted mean difference in change from baseline vs Placebo†¶</b> | -0.67<br>95% CI: (-1.76, 0.43)<br>1-sided p = 0.215 | -1.28<br>95% CI: (-2.41, -0.15)<br>1-sided p = 0.0738 | NA                                    |

\* Presented as mean (standard deviation) [number of observations (n); number of observations below LLoD].

\$ Undetectable levels of CFU/g were imputed with the assay LLoD, i.e.  $\log_{10}\text{-CFU/g} = \log_{10}(1000)$ .

¶ Undetectable levels of CFU/g were imputed with half the assay LLoD, i.e.  $\log_{10}\text{-CFU/g} = \log_{10}(500)$ .

† Adjusted for randomised treatment arm, baseline  $\log_{10}\text{-CFU/g}$ , long-term antibiotic use at baseline, and site (random effect).

CI: Confidence interval.

LLoD: Lower limit of detection.

CFU: Colony-forming units

**Adverse Events**

***Number of patients with at least one Adverse Event and Serious Adverse Event per arm.***

| Treatment arm     | Number of patients | Number with at least one AE | Number with one or more (at least possibly treatment related) AE | Number with at least one SAE | Number with one or more (at least possibly treatment related) SAE |
|-------------------|--------------------|-----------------------------|--|------------------------------|---|
| Gremubamab 1500mg | 12                 | 11 (91.7%)                  | 7 (58.3%)  | 0 (0.0%)                     | 0 (0.0%)  |
| Gremubamab 500mg  | 13                 | 11 (84.6%)                  | 8 (61.5%)  | 2 (15.4%)                    | 1 (7.7%)  |
| Placebo           | 12                 | 11 (91.7%)                  | 5 (41.7%)  | 2 (16.7%)                    | 0 (0.0%)  |
