One SAE has been reported to date.

SAE summary: On 12 June 2023, a 38-year-old female volunteer included in the TBVAX#2 study in Doneguebougou under the identifier MA-22-2060-V was received for an unscheduled visit for right inguinal pain radiating to the pelvis, vomiting, in whom our clinical examination found a history of inguinal hernia for more than 10 years, agitation, and a right inguinal mass that was hard and painful to palpation. Given the agitation and the intensity of the pain, suggesting a suspected strangulated inguinal hernia, we decided

to refer to the volunteer to the surgery department of the Point G Bamako, University Hospital for better management. The diagnosis of strangulated inguinal hernia was confirmed at the Point G, Bamako University Hospital surgery department. The volunteer was taken for emergency surgery for a strangulated inguinal hernia. The surgery went well, and the participant was feeling good. The severity of the SAE was Life-threatening, and it was not related to the study.

Issues and problems related to study conduct:

On Thursday, September 22, 2022, an episode of mistaken vaccination occurred. One volunteer assigned to Arm 2d (100 µg R0.6C-AIOH/25 µg Matrix-M co-administered with 20 µg Pfs230D1-EPA/27 µg Matrix-M™) mistakenly received vaccines from Arm 2a (100 µg R0.6C-AIOH/50 µg Matrix-M™ co-administered with Saline Control) instead. The error was detected within approximately 40 minutes during routine checks, and upon further investigation was found to be due to insufficient double-checking between the randomization sheet and the vaccine order form. For Arm 2a and Arm 2d, the first type of vaccine to be administered is identical, and the first type of vaccine was taken without identifying the second type of vaccine. The pharmacy team has since re-trained with a focus on verification of Arm assignments across the randomization sheet and pharmacy order forms.

The volunteer has remained blinded, with a plan to continue vaccinations on Arm 2a and this incident has been reported to the FMPOS ethical committee.

Lost to follow-up

6 subjects lost to follow up at the time of the report.
