Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Abdominal Aortic Aneurysms (AAA)

Interventions

50% randomised to ultrasound screening. Surveillance of patients with detected AAA. All subjects considered for surgical AAA repair if clinical need.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Prevalence and incidence of AAA in men and women 65 - 80 years of age in community.

Secondary outcome measures

The effect of AAA screening on mortality from AAA and AAA surgical workload.

Overall study start date

01/01/1989

Completion date

31/12/2015

Eligibility

Key inclusion criteria

Men and women aged 65 - 80 years

Participant type(s)

Patient

Age group

Senior

Sex

Both

Target number of participants

16,000

Key exclusion criteria

No specific exclusions

Date of first enrolment

01/01/1989

Date of final enrolment

31/12/2015

Locations

Countries of recruitment

England

United Kingdom
