Study information

Scientific Title

Study objectives

4,000 women will be examined at an early stage of their pregnancy and the 7.5% with the worst period periodontal condition will be randomly assigned to either intensive periodontal treatment or normal care. Data on pregnancy outcome will be collected for all subjects. The major objective is to establish whether the potential adverse effect of chronic periodontitis on pregnancy outcome can be prevented by treatment during pregnancy.

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Chronic periodontitis during pregnancy

Interventions
1. Intensive periodontal treatment
2. Standard care

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
Proportion of mothers in sample having small babies

Key secondary outcome(s))
Not provided at time of registration

Completion date
01/10/2001

Eligibility

Key inclusion criteria
4,000 pregnant women will receive a periodontal examination, from which the 300 most severe cases will be invited to participate in the study.

Participant type(s)

Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
Female

Key exclusion criteria
Not provided at time of registration

Date of first enrolment
01/01/1998

Date of final enrolment
01/10/2001
