Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Acute, non-streptococcal tonsillopharyngitis

Interventions
60 patients were randomised to receive either:
1. Herbal remedy EPs 7630, 20 drops thrice daily, or
2. Symptomatic therapy (gargling with fruit vinegar and lukewarm water, Priessnitz compresses).

The duration of individual treatment lasted over a maximum of 10 days.

Intervention Type
Drug

Phase
Not Specified

Drug/device/biological/vaccine name(s)
EPs 7630

Primary outcome(s)
Not provided at time of registration

Key secondary outcome(s))
Not provided at time of registration

Completion date
30/04/1997

Eligibility

Key inclusion criteria
The study took place between March and April 1997. It is terminated. Patients, who met the following inclusion criteria, were suitable for the trial:
1. Age 6-10 years
2. Acute exsudative tonsillopharyngitis
3. Duration of symptoms less than 48 h
4. No Group A Beta Hemolytic Streptococcus (GABHS)-infection
5. Tonsillopharyngitis Severity Score (TSS) 6 or more points, and
6. Informed consent in writing by legal guardians who were able to understand the nature, meaning and consequences of the trial
