Study information

Scientific Title

Identifying the most effective method of educating men about prostate cancer screening: A randomised controlled trial

Study objectives

This project aims to identify the most effective format for delivering information about prostate cancer screening to potential consumers with respect to decision-making, knowledge and health attitudes.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Screening

Participant information sheet

Health condition(s) or problem(s) studied

Education methods for screening for prostate cancer

Interventions

Information about screening for prostate cancer delivered via a video, the Internet and written pamphlet

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

1. Decisional conflict
2. Screening interest/uptake
3. Health knowledge
4. Anxiety
5. Patient/doctor decision making process

Secondary outcome measures

Not provided at time of registration

Overall study start date

28/02/2005

Completion date

31/12/2005

Eligibility

Key inclusion criteria

Men aged over 45 not previously tested for prostate cancer

Participant type(s)

Patient

Age group

Adult

Sex

Male

Target number of participants

180

Total final enrolment

161

Key exclusion criteria
