Scientific Title

A pilot randomised controlled trial of general practice-based, pharmacist-led, management of chronic pain

Acronym

PIPPC

Study objectives

We wish to conduct a definitive trial that tests whether pharmacists advice or pharmacists advice and prescribing will lead to better patient functioning and/or better pain control than standard care. This exploratory randomised controlled trial (RCT) will support the development and test the feasibility of conducting a future large multi-centred RCT to evaluate practice-based, pharmacist-led management of chronic pain in primary care.

Ethics approval required

Old ethics approval format

Ethics approval(s)

North of Scotland Research Ethics Service, Committee 1 (NoSRES) approved on the 30th November 2009 (ref: 09/S0801/107)

Study design

Exploratory randomised controlled trial

Primary study design Interventional

Secondary study design Randomised controlled trial

Study setting(s)

Health condition(s) or problem(s) studied

Chronic pain

Interventions

There are three arms in this study:

1. Pharmacist review: pharmacist medication review with recommendations for changes in pain medication made to GPs for indirect implementation

2. Pharmacist prescribing: pharmacist medication review with pain management

recommendations implemented directly by pharmacist at a face-to-face consultation with the patient

3. Standard care provided by GP (control)

Total duration of treatment for pharmacist prescribing arm is 31 minutes. Follow-up may take place between 2 - 4 weeks after initial consultation and take place at maximum twice a month for the 6-month follow-up period of the study. The follow-up period for all arms is 6 months.

Intervention Type

Other

Phase Not Applicable

Primary outcome measure

Information from this pilot RCT will be used to inform final selection of a single primary outcome measure from the following:

1. 12-item short form health survey (SF-12)

2. Health Utilities Index mark 2 and mark 3 (HUI 2/3)

Administered for self-report, postal questionnaire at baseline, three and six month follow-up.

Secondary outcome measures

1. The Chronic Pain Grade (assessing severity of pain)

2. The Hospital Anxiety and Depression Scale (assessing level of anxiety and depression) Questionnaires are administered as self-report, postal questionnaire at baseline, three and six month follow-up.

Overall study start date

04/01/2010

Completion date

01/11/2010

Eligibility

Key inclusion criteria

1. GP practices: any general practice with an existing practice pharmacist service

2. Pharmacists: a registered prescriber with evidence of appropriate professional indemnity cover

- 3. Patients:
- 3.1. Male and female patients
- 3.2. Aged over 18 years old
- 3.3. Chronic pain (defined as pain lasting more than 13 weeks)
- 3.4. Receiving regular prescribed medication for pain

Participant type(s) Patient

Age group Adult

Lower age limit

18 Years

Sex

Both

Target number of participants

Patients: 216; GP practices: 6; pharmacists: 6

Key exclusion criteria

1. GP practices: no existing practice pharmacists

- 2. Pharmacists: not a registered prescriber or does not have evidence of appropriate
- professional indemnity cover
- 3. Patients:
- 3.1. Under 18 years old
- 3.2. Not experiencing chronic pain
- 3.3. Concomitant severe mental health problems
- 3.4. Terminal illness
- 3.5. Recent bereavement
- 3.6. Known alcohol or drug addiction
- 3.7. Unable to give informed consent
- 3.8. Malignant pain
- 3.9. Recent participation in research

3.10. Any other reason at the discretion of the GP for whom the intervention is considered inappropriate

Date of first enrolment

04/01/2010

Date of final enrolment

01/11/2010
