#### Scientific Title

Delivering the Diabetes Prevention Programme in a UK community setting: UEA-IFG Study

### Acronym

DRN135 (Diabetes Prevention Programme: UEA-IFG Study)

### **Study objectives**

This two year feasibility programme will screen for participants at risk of diabetes (impaired fasting glucose). For those participants at risk of diabetes, the second stage of the programme will be to investigate whether a structured diet and lifestyle programme (called UEA-IFG) can be developed and whether the programme reduces the risk of Type 2 Diabetes Mellitus. The end stage would be to develop a full RCT to test the intervention programme fully.

### Ethics approval required

Old ethics approval format

### Ethics approval(s)

MREC approved (ref: 08/H0301/102)

### Study design

Single centre randomised interventional prevention and screening trial

### Primary study design

Interventional

### Secondary study design

Randomised controlled trial

### Study setting(s)

Hospital

### Study type(s)

Prevention

### Participant information sheet

### Health condition(s) or problem(s) studied

Topic: Diabetes Research Network, Primary Care Research Network for England; Subtopic: Type 2, Not Assigned; Disease: All Diseases, Prevention/screening

#### **Interventions**

Diabetes Prevention Programme: Lifestyle programme based on the U.S. Diabetes Prevention Programme. Participant targets will be to:

- 1. Lose 7% of body weight
- 2. Build up to 2.5 hours of brisk physical activity each week
- 3. Build up to walking at least 10,000 steps a day
- 4. Eat more healthily by eating less fat

Study entry: single randomisation only

### **Intervention Type**

Other

#### Phase

Not Applicable

### Primary outcome measure

Transition to type 2 diabetes mellitus (fasting plasma glucose of 7.0 mmol/l or greater) after 17 months

### Secondary outcome measures

Not provided at time of registration

### Overall study start date

08/12/2008

### Completion date

14/01/2010

# Eligibility

### Key inclusion criteria

- 1. Male or female
- 2. Aged 45 70 years
- 3. One of the following:
- 3.1. First degree relative with type 2 diabetes
- 3.2. Body mass index (BMI) greater than 25 kg/m2
- 3.3. Waist circumference greater than 94 cm (male) or greater than 80 cm (female)
- 3.4. History of gestational diabetes
- 3.5. History of coronary heart disease

### Participant type(s)

**Patient** 

#### Age group

Adult

### Sex

Both

### Target number of participants

Planned sample size: 870; UK sample size: 870

### Key exclusion criteria

Does not meet inclusion criteria

### Date of first enrolment

08/12/2008

### Date of final enrolment

14/01/2010
