## Study information

## Scientific Title

#### **Study objectives**

Compression bandaging is the mainstay of venous leg ulcer treatment, however the optimal bandage regimen is unclear and there are large variations in practice. The 4 layer bandage (4LB) is used widely in the UK but is discarded after a single use and is relatively expensive. The short-stretch bandage (SSB) id the standard bandage in Europe, and is reusable. A recent systematic review demonstrated the paucity of RCTs in this area, and those that exist are of poor quality. The review also showed that multilayer bandaging is more effective than single layer; high compression systems such as the 4LB and SSB are more effective than low compression systems; however the two trials that have compared SSB and 4LB were vastly underpowered and did not incorporate an economic analysis. This study proposes to compare the 4LB and SSB systems in a two-arm pragmatic RCT involving 400 patients with venous ulcers. Patients will be followed up until healing or for a maximum period of 30 months.

Substantial benefits to the NHS and patients will occur if the trial demonstrated one of the bandages is superior to the other; substantial resource savings would occur in bandage expenditure if it were shown that the SSB was of at least equivalent effectiveness to the 4LB.

**Ethics approval required** Old ethics approval format

**Ethics approval(s)** Not provided at time of registration

**Study design** Randomised controlled trial

**Primary study design** Interventional

**Secondary study design** Randomised controlled trial

**Study setting(s)** Not specified

**Study type(s)** Not Specified

Participant information sheet

Health condition(s) or problem(s) studied Varicose veins/ulcers

#### Interventions

1. 4 layer bandage 2. Short stretch bandage

**Intervention Type** Other

**Phase** Not Specified

**Primary outcome measure** Proportion of ulcers completely healed; healing rates; costs; quality of life; recurrence rates at 12 months.

**Secondary outcome measures** Not provided at time of registration

**Overall study start date** 01/10/1998

**Completion date** 31/01/2002

# Eligibility

**Key inclusion criteria** Patients with leg ulcers

**Participant type(s)** Patient

**Age group** Adult

**Sex** Both

**Target number of participants** 400

**Key exclusion criteria** Not provided at time of registration

**Date of first enrolment** 01/10/1998

Date of final enrolment 31/01/2002
