Study information

Scientific Title

Acronym

ESCHAR

Study objectives

The surgical correction of superficial venous surgery in addition to compression reduces venous ulcer recurrence in comparison to compression therapy alone.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approval received from Gloucestershire Local Research Ethics Committee on the 29th January 1998 (ref: 98/44E).

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Chronic venous ulceration

Interventions

Two groups were randomised to either compression therapy alone or compression plus superficial venous surgery.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. Ulcer healing
2. Ulcer recurrence

Key secondary outcome(s))

Ulcer free time

Completion date

01/08/2002

Eligibility**Key inclusion criteria**

Open or recently healed leg ulceration (within six months) of greater than four weeks duration between knee and malleoli, with Ankle Brachial Pressure Index (ABPI) above 0.85 and duplex evidence of superficial with or without deep venous reflux.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria

1. Duplex imaging not possible
2. Patient unable/unwilling to give informed consent
3. Deep venous occlusion
4. Unfit for surgery (even under local anaesthetic)
5. Multilayer compression therapy not practical
6. Malignant ulceration

Date of first enrolment

01/01/1999

Date of final enrolment

01/08/2002

Locations**Countries of recruitment**

United Kingdom

England
