Study information

Scientific Title

Pharmaceutical optimization of the medication process during admission to hospital: A multicentre, randomised, controlled trial

Acronym

POMP

Study objectives

A pharmaceutical intervention consisting of: review and use of patient 'sown drugs, secondary medication history, medication review and entry of proposed prescriptions in the electronic medication system will reduce the number of adverse drug events during hospital stay.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approval by the Danish Ethics Committee is not applicable since the study is not of biomedical nature

Study design

Multicentre interventional prospective randomised clinical controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Prevention

Participant information sheet

Not available in web format, please use contact details below to request a patient information sheet.

Health condition(s) or problem(s) studied

In-hospital adverse drug events

Interventions

Please note that the anticipated end date for this trial has been extended from 01/11/10 to 31/03/10.

Intervention Group

1. Review and use of patient own drugs by clinical pharmacist.
2. Clinical pharmacist taking secondary medication history.
3. Medication review by clinical pharmacist.
4. Entry of proposed prescriptions in the electronic medication system by pharmacist, ready for

approval by doctor.

The intervention takes place on the day the patient is admitted, and the duration of the intervention is approximately 1.5 hours.

Control Group

Standard care with no pharmacist involvement

There is no follow up examination, but re-admission rates will be noted for 1 year post intervention.

Intervention Type

Other

Phase

Not Applicable

Primary outcome measure

Number of patients with in-hospital adverse drug events, detected by Adverse Drug Event Trigger Tool.

Secondary outcome measures

1. Length of hospital stay
2. Number of readmissions during the first year after admission
3. Direct cost for the hospital

Overall study start date

08/03/2010

Completion date

31/03/2011

Eligibility

Key inclusion criteria

1. Patients being admitted to an internal medicine ward
2. Age 18 years or more
3. Taking 4 types of medicine or more each day
4. Able to understand participant's information written in Danish

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Sex

Both

Target number of participants

648 (across 3 centres)

Key exclusion criteria

1. Patients transferred from other hospitals in the area
2. Dying or terminally ill patients
3. Patients being discharged within 48 hours from admission

Date of first enrolment

08/03/2010

Date of final enrolment

31/03/2011
