Study information

Scientific Title
Assessment of the immunogenicity and safety of the Northern Hemisphere 2009/2010-season influenza vaccine in children aged 6 to 35 months in comparison to a commercially available influenza vaccine: an observer-blind, randomised, controlled, safety/immunogenicity study

Study objectives
The Northern Hemisphere 2009/2010-season virosomal influenza vaccine is as immunogenic as the comparator vaccine.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Local Medical Ethics Committee in China approved on the 11th September 2009 (ref: IRB No. 00001594)

Study design
Observer-blind randomised controlled safety/immunogenicity study

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Hospital

Study type(s)
Treatment

Participant information sheet
Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied
Influenza

Interventions
Biological: two doses of trivalent virosomal adjuvanted influenza vaccine (Inflexal® V) or control vaccine. Total duration of follow-up: approximately 1.5 months.

Intervention Type
Drug

Phase
Phase III

Drug/device/biological/vaccine name(s)
2009/2010-season virosomal influenza vaccine (Inflexal® V)

Primary outcome measure
Immunogenicity, assessed by haemagglutination inhibition test; blood to be collected at baseline and approximately three weeks after second dose administration.

Secondary outcome measures
Safety, assessed at baseline and at three to four weeks after each vaccination, including a four-day adverse event questionnaire, soliciting a set of local and systemic adverse events (AEs).

Overall study start date
28/09/2009

Completion date
30/04/2010

Eligibility

Key inclusion criteria
1. Healthy children (male or female) aged 6 to 35 months
2. Written informed consent

Participant type(s)
Patient

Age group
Child

Lower age limit
6 Months

Upper age limit
35 Months

Sex
Both

Target number of participants
1239

Key exclusion criteria
1. Previous influenza vaccination
2. Serious adverse reaction to any influenza vaccine
3. Medical treatment with immune suppressant or immune modulating drugs
4. Presentation of clinical symptoms of active infection and/or body temperature greater than or equal to 38°C

Date of first enrolment
28/09/2009

Date of final enrolment
30/04/2010
