Study information

Scientific Title
Is acupuncture effective in improving the course of recovery from depression?

Study objectives

To determine whether the use of additionally applied acupuncture to known psychoactive points can improve the course of recovery from depression and to determine its acceptability as a treatment.

Updated 08/09/2015: the trial did not go ahead due to changes in staffing affecting the ability to deliver the intervention.

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Mental and Behavioural Disorders: Depression

Interventions

Single-blind placebo-controlled randomised controlled trial

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Presentation at local level and publication

Key secondary outcome(s)

Not provided at time of registration

Completion date

01/10/2004

Reason abandoned (if study stopped)

Lack of staff/facilities/resources

Eligibility

Key inclusion criteria

Patients between 18-60 attending clinic for first time

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Upper age limit

60 years

Sex

All

Key exclusion criteria

Does not meet inclusion criteria

Date of first enrolment

01/09/2003

Date of final enrolment

01/10/2004
