Plain English summary of protocol

Background and study aims
Leukoplakia is a white patch in the mouth. The WHO Collaborating Centres for Oral Precancerous conditions have clinically defined the term oral leukoplakia (OL) as “white mucosal lesions that have a risk of progressing to squamous carcinoma”. To date, the term OL should be used to recognize “predominantly white plaques of questionable risk having excluded (other) known diseases or disorders that carry no increased risk for cancer”. The vast majorities of OLs are localized lesions and follow a benign course. Small subsets of these lesions can become cancerous.
The aim of this study was to assess the effectiveness of surgery in the treatment of OL, in order to compare the "wait and see" approach in term of possible malignant transformation.

Who can participate?
Caucasian patients aged 18 years or above, with OL without signs of cancer

What does the study involve?
Participants will be randomly assigned to receive either surgical removal of the OL, or treatment as usual

What are the possible benefits and risks of participating?
None

Where is the study run from?
CIR-Dental School, University of Turin, Italy

When is the study starting and how long is it expected to run for?
January 2012 to December 2014

Who is funding the study?
Università degli Studi di Torino (University of Turin), Italy

Who is the main contact?
Prof. Paolo G. Arduino
paologiacomo.arduino@unito.it

Study information

Scientific Title
A randomized no intervention-controlled trial of surgery in oral leukoplakia with no dysplasia

Acronym
SurOL

Study objectives
The aim of this study is to evaluate the surgical outcome of patients diagnosed with an oral leukoplakia without dysplasia, compared to patients with the same diagnosis who did not undergo surgery

Ethics approval required
Old ethics approval format

Ethics approval(s)
Approved 07/01/2009, CIR-Dental School (Via Nizza 230, Turin, 10126, Italy; segr_cirdental@unito.it), ref: AP-RB2009/1234

Study design
Two arm randomized controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Hospital

Study type(s)
Treatment

Participant information sheet
Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied
Oral leukoplakia with no signs of dysplasia

Interventions
Consecutive Caucasian patients, attending the Oral Medicine Section of the Department of Surgical Sciences, Turin Hospital, Italy, from January 2012 and December 2013, are selected for the present study. Participants are randomly divided into two groups. Allocation to treatment arms is performed using sequentially numbered randomization table. RANCODE (version 3.6) is used to generate the randomization sequence.

The first group of patients undergo surgical excision of the lesion with a traditional scalpel, (GROUP A_TS) whereas the second group of patients are followed up with no surgical session (GROUP B_NS).

The period of follow up is 5 years.

Intervention Type
Procedure/Surgery

Primary outcome measure
Malignant transformation of the biopsied lesion measured using visual inspection by a physician every six months

Secondary outcome measures

Progression of the disease measured using visual inspection by a physician every six months

Overall study start date
01/01/2012

Completion date
01/01/2020

Eligibility

Key inclusion criteria
1. Caucasian patients, attending the Oral Medicine Section of the Department of Surgical Sciences, Turin Hospital
2. Diagnosis of oral leukoplakia with no signs of dysplasia
3. Adults aged 18 and older

Participant type(s)
Patient

Age group
Adult

Lower age limit
18 Years

Sex
Both

Target number of participants
300

Total final enrolment
260

Key exclusion criteria
1. Patients with a previous diagnosis of oral cancer.
2. Pregnant or lactating females; patients with incapacity to understand verbal and written instructions

Date of first enrolment
01/01/2012

Date of final enrolment
30/12/2014

Locations

Countries of recruitment
Italy

Results and Publications

Publication and dissemination plan
Planned publication in a peer reviewed journal.

Intention to publish date
01/06/2020

Individual participant data (IPD) sharing plan
The datasets generated during and/or analysed during the current study are available from the corresponding author on reasonable request

IPD sharing plan summary
Available on request
