Study information

Scientific Title

Study objectives
The tested intervention (level five intervention of Triple P, an intensive individual training for the family of children with behavioural problems) will cause a decrease in behavioural problems in children, dysfunctional parenting styles in parents, and depression, anxiety and stress in parents. Furthermore it will cause an increase in parenting competences in parents.

Ethics approval required
Old ethics approval format

Treatment

Participant information sheet

Health condition(s) or problem(s) studied
Behavioural and emotional problems in children

Interventions
The Triple P (Positive Parenting Program) consists of five levels, ranging from brief and broad support to parents in dealing with a child who exhibits behavioural problems to an intensive family intervention (level five). This intervention is aimed at family dysfunction and serious behavioural problems in a child. It offers intensive individual training for the family (around eleven sessions of one hour each, divided in modules), focusing on the childs behavioural problems (in combination with problems of the parents such as conflict between the partners, depression and stress).

Intervention Type

Other

Phase
Not Specified

Primary outcome measure
Decrease of behavioural and emotional problems in children.

Secondary outcome measures
1. Decrease of dysfunctional parenting styles
2. Depression, anxiety and stress in parents
3. Increase of parenting competences

Overall study start date
01/10/2006

Completion date
31/12/2008

Eligibility

Key inclusion criteria
1. Multi-problem family
2. Children between four to 13 years old

Participant type(s)
Patient

Age group
Child

Lower age limit
4 Years

Upper age limit
13 Years

Sex
Both

Target number of participants
200

Key exclusion criteria
Does not comply with the above inclusion criteria

Date of first enrolment
01/10/2006

Date of final enrolment

31/12/2008
