Study information

Scientific Title

Study objectives

The aim of this investigation is to establish whether showing patients images of their own atherosclerotic arteries will motivate change in the patient's thoughts regarding their smoking habits. Do patients feel more motivated to stop smoking when they are visually confronted with the concrete damage that their smoking has incurred?

Study design

Pilot randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Not Specified

Participant information sheet

Health condition(s) or problem(s) studied

Mental and Behavioural Disorders: Smoking cessation

Interventions

Vascular outpatients are randomly allocated to either be shown a picture of their own damaged arteries, an index of vascular disease and a picture of a healthy artery or a control group without this intervention. Questionnaires regarding the patients intention to stop smoking will be completed by both groups.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Patients' intention to stop smoking.

Secondary outcome measures

Not provided at time of registration

Overall study start date

15/03/2004

Completion date

15/06/2005

Eligibility

Key inclusion criteria

Adult smokers (at least 1 cigarette per day) attending an outpatient vascular clinic at Guy's Hospital.

Participant type(s)

Patient

Age group

Adult

Sex

Not Specified

Target number of participants

60-80 subjects required

Key exclusion criteria

1. Inability to give informed consent
2. Understand the questionnaire or the nature of the ultrasound
