Study information

Scientific Title

Acronym

KISS

Study objectives

It is hypothesised that the intervention will result in an increase of physical activity, fitness and health in the intervention group compared to the controls.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved by the Ethics Committees of the University of Basel, the University of Zürich, as well as by the Cantonal Ethical Committee of Aargau, Switzerland.

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Healthy children with about 20% obese children included

Interventions

The intervention will comprise environmental changes at school (i.e. daily physical activity) and individual components at home aiming at improving pattern and extent of physical activity and the control will have a usual school physical activity curriculum.

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

- 1. Total physical activity
- 2. Aerobic fitness
- 3. Percentage body fat
- 4. Bone mineral density of the femur
- 5. Quality of life

Key secondary outcome(s))

- 1. Body composition (total lean and fat mass)
- 2. Body fat distribution
- 3. Additional cardiovascular risk factors
- 4. Bone mineral density of total body and lumbar spine and as well as bone mineral content of all

measured sites

- 5. Bone metabolism
- 6. Overall fitness
- 7. Psychosocial health, social coping, stress coping, social anxiety, self esteem and addiction
- 8. Nutritional behaviour

Completion date

31/12/2009

Eligibility

Key inclusion criteria

Healthy children

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Child

Sex

All

Key exclusion criteria

Children with severe chronic disease (cyanotic heart disease, cystic fibrosis, asthma, motor disabilities)

Date of first enrolment

31/10/2005

Date of final enrolment

31/12/2009

Locations

Countries of recruitment
