| Plain English summary of protocol Background and study aims The aim of this study is to detect the changes in pupil size following cataract surgery.   |  |   |
| Who can participate?<br>Adults aged 48 to 81 and undergoing cataract surgery.  |  |   |
| What does the study involve? All patients will receive the same type of intraocular lens. Measurements will be made five minutes after the operation and then one month after the operation. |  |   |
| What are the possible benefits and risks of participating? The benefit is better visual acuity after the operation. The risk is complication after standard cataract surgery.                |  |   |
| Where is the study<br>Uskudar University   |  |   |
| When is study starting and how long is it expected to run for?<br>From December 2014 to February 2015  |  |   |
| Who is funding the<br>Uskudar University   | study?<br>and GMMA Haydarpasa                  | Training Hospital   |
| Who is the main contact? Dr. Yildiray Yildirim yyildirim@gata.edu.tr   |  |   |

# Study information

#### Scientific Title

Changes in pupil size following phacoemulsification surgery: a prospective cohort study

## Study objectives

The pupil size is important in appropriate cases in whom the combination with phacoemulsification and multifocal intra occular lenses (IOL) implantation would be performed. This is because postoperative visual disturbances may be directly related to the pupil size. Therefore, pupil size assessment of the patients who are to undergo implantation of a multifocal lens is important.

## Ethics approval required

Clinical Research Ethics Committee of Haydarpasa Numune Training and Research Hospital, Istanbul. 22/12/2014, HNEAH-KAEK 2014/92

# Study design

Prospective cohort study

# Primary study design

Observational

# Study type(s)

Treatment

## Health condition(s) or problem(s) studied

Changes in pupil size developing after phacoemulsification surgery

#### Interventions

All patients will have phacoemulsification surgery and implantation of the same type of intraocular lens. Pupil measurements will be made after each patient waited in a dark room for 5 minutes preoperatively and will be repeated one month after the operation.

#### Intervention Type

Procedure/Surgery

## Primary outcome(s)

Preoperative and postoperative pupil size changes

# Key secondary outcome(s))

Optic aberrations

#### Completion date

05/02/2015

# **Eligibility**

#### Key inclusion criteria

- 1- Male and female patients aged between 48 and 81
- 2- Patients with cataracts

#### Participant type(s)

**Patient** 

#### Healthy volunteers allowed

No

#### Age group

Adult

#### Sex

All

#### Key exclusion criteria

- 1- Patients who have a history of ocular trauma, uveitis, optic neuropathy or anisocoria and also have other accompanying serious ocular diseases except cataract
- 2- Patients who have a complicated phacoemulsification surgery

#### Date of first enrolment

25/12/2014

#### Date of final enrolment

05/01/2015
