# Study information

Scientific Title

#### Study objectives

Aim: to develop a tailored theory-based intervention to promote appropriate disclosure of diagnosis of dementia.

As of 28/07/09 this record has been updated. All updates can be found in under the relevant fiels with the above update date.

#### Ethics approval required

Old ethics approval format

#### Ethics approval(s)

Added as of 28/07/09:

- 1. Multi-Centre Research Ethics Committee for Scotland
- 2. Research and Development offices of the participating NHS trusts

#### Study design

Randomised controlled trial

#### Primary study design

Interventional

#### Study type(s)

Not Specified

## Health condition(s) or problem(s) studied

Dementia

#### **Interventions**

A theory-based survey of mental health teams will identify factors that are (a) modifiable and (b) the best predictors of behavioural intention. As there will be a range of these factors with these characteristics, we will select from them those factors which, in addition, can be modified by an intervention that is feasible. Then we shall select the three most promising interventions and simulate delivering them within a trial and examine their effects. There will be a fourth control (no intervention) arm.

#### **Intervention Type**

Other

#### **Phase**

**Not Specified** 

#### Primary outcome(s)

Professionals' behavioural intention and simulation

# Key secondary outcome(s))

Added as of 28/07/09: No secondary outcome measures

## Completion date

# **Eligibility**

# Key inclusion criteria

Mental health teams for older people

### Participant type(s)

**Patient** 

# Healthy volunteers allowed

No

#### Age group

Senior

#### Sex

All

# Key exclusion criteria

Does not meet inclusion criteria

#### Date of first enrolment

01/04/2004

#### Date of final enrolment

31/03/2006

# Locations

#### Countries of recruitment

United Kingdom

England
