Study information

Scientific Title

Acronym

The CLasP Study

Study objectives

Ten to fifteen percent of men aged 40 undergo transurethral prostatectomy (TURP) in their lifetime.

About 20% do not achieve satisfactory symptomatic results, 5% to 10% suffer major morbidity and 0.2% to 1% die from the procedure. The annual cost of TURP in the USA is in excess of \$3,000,000,000. New, less invasive treatments are now available including laser treatment which may be provided as a day-case procedure. It is unclear how laser treatment compares with TURP or indeed with conservative treatment (watchful waiting - reassurance and advice) in terms of cost, effectiveness, improvement in quality of life and urodynamic outcome. These deficiencies in knowledge are clearly very important to the NHS which cannot afford to take up high cost, high technology treatments unless they are shown to be of clear benefit. We propose carrying out a randomised controlled trial comparing TURP, laser treatment and watchful waiting in men who would normally undergo TURP.

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Bladder outflow obstruction in men

Interventions

- 1. Laser therapy with a noncontact, side firing neodymium: YAG probe
- 2. TURP (standard transurethral prostatic resection)
- 3. Watchful waiting (conservative management, including monitoring without active intervention)

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

- 1. International Prostate Symptom Score (I-PSS)
- 2. Maximum urinary flow rate
- 3. A composite measure of success based on I-PSS and maximum urinary flow rate categories
- 4. I-PSS quality of life score
- 5. Post-void residual urine volume

Secondary outcome measures

- 1. Treatment failure
- 2. Hospital stay
- 3. Major complications.

Overall study start date

10/01/1994

Completion date

30/09/1997

Eligibility

Key inclusion criteria

Men with uncomplicated lower urinary tract symptom that is not acute or chronic urinary retention.

Participant type(s)

Patient

Age group

Other

Sex

Male

Target number of participants

106 (added 15/01/10; see publication [2])

Key exclusion criteria

Does not match inclusion criteria

Date of first enrolment

10/01/1994

Date of final enrolment

30/09/1997

Locations

Countries of recruitment
