Study information

Scientific Title

Western Australian randomised controlled trial of screening for abdominal aortic aneurysms

Study objectives

Screening for abdominal aortic aneurysms (AAAs) in men aged 65-83 years reduces mortality from AAA

Ethics approval required

Old ethics approval format

Ethics approval(s)

The Committee for Human Rights at the University of Western Australia

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Screening

Participant information sheet

Not available in web format, please use contact details to request a participant information sheet

Health condition(s) or problem(s) studied

Abdominal aortic aneurysm

Interventions

Screening by ultrasound scanning versus no screening

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Mortality from abdominal aortic aneurysm

Secondary outcome measures

1. All-cause mortality
2. Procedures for abdominal aortic aneurysm
3. Cost
4. Quality of life
5. Expansion rate of small abdominal aortic aneurysms

Overall study start date

01/04/1996

Completion date

01/04/2016

Eligibility

Key inclusion criteria

Men aged 65-83 years, resident in the metropolitan area of Perth, Western Australia

Participant type(s)

Patient

Age group

Senior

Sex

Male

Target number of participants

41,000

Key exclusion criteria

None

Date of first enrolment

01/04/1996

Date of final enrolment

01/04/2016

Locations

Countries of recruitment

Australia

Study participating centre

University of Western Australia
Fremantle
Australia
6160
