Study information

Scientific Title

Efficacy of a multicomponent support programme for caregivers of disabled persons: a randomised controlled study

Acronym

CAREGIVER

Study objectives

A tailored support programme for caregivers of the disabled persons is effective in helping them to continue their caregiving.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval received from the Ethical Committee of Kymenlaakso Central Hospital, Kotka on the 17th December 2001 (addition 17th February 2003).

Study design

A randomised controlled trial

Primary study design

Interventional

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Caregiving of a disabled person

Interventions

Tailored two weeks training period in a rehabilitation centre, with tailored physical exercise, lessons about caregivers role to give psychological support and increase caregivers' knowledge and checking for medical treatments.

The control group received usual care.

The follow-up time was two years for mortality and continuation of caregiving, one year for quality of life and Zung's depression scale.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. Mortality of the care receiver
2. Continuity of caregiving
3. Placement of the care receiver into an institutional care

Primary outcomes were measured at two years.

Key secondary outcome(s))

1. Health related quality of life of the caregiver (15D Measure of Health-Related Quality of Life)
2. Depressive symptoms of the caregiver (Zung's depression scale)

Secondary outcomes were measured at one year.

Completion date

31/12/2006

Eligibility**Key inclusion criteria**

1. 135 caregiver - care receiver dyads randomly divided into an intervention group (n = 66) and a control group (n = 69)
2. Caregiver of a disabled adult person living in Kuusankoski and Kouvola region (south-east Finland)
3. Caregiving continued at least six months
4. Ability to leave the care receiver to temporary institutional care
5. Ability to live in spa-hotel conditions during the intervention

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Total final enrolment

135

Key exclusion criteria

1. Serious mental or physical disease of the caregiver
2. Caregiving only occasional
3. Not able to leave the care receiver
4. Not able to live in a spa-hotel during the intervention

Date of first enrolment

26/02/2003

Date of final enrolment

31/12/2006
