Study information

Scientific Title

The efficacy of Sonographic and biological pleurodesis indicators of Malignant PLeural Effusion (SIMPLE) -- a randomised trial

Acronym

SIMPLE

Study objectives

The aim of this trial is to:

- 1. Establish if a novel radiological investigation (thoracic ultrasound) can improve quality and efficacy of care for MPE patients undergoing talc pleurodesis
- 2. Establish a biobank of prospectively collected biological samples and radiology in patients undergoing talc pleurodesis, linked to robust outcome data, to investigate factors associated with pleurodesis "success" and redefine the current understanding in a patient centred model

Ethics approval required

Old ethics approval format

Ethics approval(s)

12/11/2015, ref: 15/SC/0600

Study design

Multi-centre randomized controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Malignant pleural effusion

Interventions

Participants are randomly allocated to one of two groups:

Intervention group: Participants receive thoracic ultrasound imaging before and post talc administration.

Control group: Participants receive talc pleurodesis with no thoracic ultrasound imaging.

Intervention Type

Procedure/Surgery

Primary outcome(s)

Length of hospital stay (in days) during the initial hospitalisation

Key secondary outcome(s))

- 1. Mortality rate is recorded at 12 months
- 2. Number of days in hospital post-randomisation with drain in situ

- 3. Patient reported dysponea/chest pain post-randomisation is measured through daily assessments for 7 days and then weekly for 4 weeks
- 4. Patient reported quality of life is measured using the EQ-5D-5L questionnaire at baseline, 1 and 3 months
- 5. Pleurodesis success is determined at 1 and 3 months
- 6. Use of healthcare resources and costs using utilisation logs is measured as discharge, 1 and 3 months

Completion date

31/12/2019

Eligibility

Key inclusion criteria

- 1. Clinically confident diagnosis of MPE requiring pleurodesis defined as any of the following (more than one can be included):
- 1.1. Histocytologically proven MPE
- 1.2. Thoracic CT evidence of pleural malignancy
- 1.3. Otherwise unexplained exudative effusion in the context of clinically proven cancer elsewhere
- 2. Written informed consent

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Total final enrolment

313

Key exclusion criteria

- 1. Aged under 18 years
- 2. Poor prognosis (pleurodesis not offered in normal practice)
- 3. Irreversible contra-indication to drain insertion

Date of first enrolment

14/12/2015

Date of final enrolment

30/09/2019
