Study information

Scientific Title

Effectiveness of thrombus aspiration compared to balloon angioplasty on myocardial reperfusion during percutaneous coronary intervention in acute myocardial infarction

Acronym

TAPAS

Study objectives

Thrombus aspiration compared to balloon angioplasty will improve myocardial reperfusion during primary percutaneous coronary intervention.

Ethics approval required

Old ethics approval format

Ethics approval(s) Ethics approval received from the local ethics committee.

Study design Randomised, active controlled, parallel group trial

Primary study design Interventional

Secondary study design Randomised controlled trial

Study setting(s) Hospital

Study type(s) Treatment

Participant information sheet

Health condition(s) or problem(s) studied Myocardial infarction

Interventions

Thrombus aspiration compared to conventional balloon angioplasty during primary percutaneous coronary intervention. Patients are assigned to treatment with thrombus aspiration with the 6F Export Aspiration Catheter (Medtronic Corporation, Santa Rosa, California, USA) or to balloon angioplasty before stent implantation in the infarct related artery.

Intervention Type Other

Phase

Not Specified

Primary outcome measure

Angiographic myocardial blush grade of less than two

Secondary outcome measures

- 1. Enzymatic infarct size
- 2. ST-segment elevation resolution
- 3. Persistent ST-segment elevation
- 4. Post-procedural distal embolisation
- 5. Major adverse cardiac events at 30 days and one year

Overall study start date

01/01/2005

Completion date 01/01/2007

Eligibility

Key inclusion criteria

1. A diagnosis of acute myocardial infarction (MI) defined by chest pain suggestive for myocardial ischaemia for at least 30 minutes, with a time from onset of symptoms of less than 12 hours, before hospital admission

2. An electrocardiogram (ECG) with ST-segment elevation of more than 0.1 mV in two or more leads

Participant type(s)

Patient

Age group

Adult

Sex Both

Target number of participants 1080

Key exclusion criteria

- 1. Rescue percutaneous coronary intervention (PCI) after thrombolytic therapy
- 2. Inability to obtain informed consent
- 3. Known existence of a life-threatening disease with a life expectancy of less than six months

Date of first enrolment

01/01/2005

Date of final enrolment

01/01/2007

Locations

Countries of recruitment Netherlands
