Plain English summary of protocol

Background and study aims
More treatment options than ever before are available for young people with vision impairment, but very little is known about the impact of these sight restoration therapies on wellbeing and mental health. In adults, sight restoration is often associated with depression and a reduction in mental wellbeing.
The aim of this study is to fully understand the wellbeing and mental health of adolescents undergoing sight restoration therapy and will develop clinical guidelines for the psychological support of young people receiving this treatment.

Who can participate?
Children and adolescents (age 10-20 years) with vision impairment who are receiving treatment expected to improve their vision.

What does the study involve?
Completing age-appropriate questionnaires five times: before receiving sight restoration treatment, then 1, 3, 6 and 12 months after treatment. Participating in a short interview before treatment and at the final visit. Participants' parent(s)/carer(s) will also complete a questionnaire at each assessment and a short interview at the first and last assessment.

What are the possible benefits and risks of participating?
Benefits: This is an exploratory study and is not likely to directly benefit participants. However, if needed, participants will be referred or signposted to appropriate mental health services.
Risks: It is possible that some of the interview questions may raise uncomfortable issues for participants or their parents/carers. The researchers have well-established risk management protocols, written in conjunction with clinical psychologists, which have been used for similar studies to ensure appropriate signposting and referral for participants who express signs of mental ill-health, up to and including emergency care.

Where is the study run from?
UCL Institute of Ophthalmology, part of University College London, in association with Moorfields Eye Hospital, Great Ormond Street Hospital for Children, and the NIHR Moorfields Biomedical Research Centre (UK)

When is the study starting and how long is it expected to run for?
January 2025 to December 2027

Who is funding the study?
1. The Medical Research Foundation (UK)
2. Moorfields Eye Charity (UK)

Who is the main contact?
Michael Crossland, m.crossland@ucl.ac.uk

Study information

Scientific Title
The emotional impact of restoring sight (EIRS): well-being and mental health in children and adolescents receiving sight restoring therapy for eye disease

Acronym
EIRS

Study objectives
This study will use mixed qualitative and quantitative research methods to understand how sight-restoring treatment (for example, gene therapy for inherited retinal disease) affects the wellbeing and mental health of young people with vision impairment.

Ethics approval required
Ethics approval required

Ethics approval(s)
notYetSubmitted, Ethics committee name not provided (Address not provided, City not provided, Zip/postal code not provided; Telephone number not provided; Email not provided), ref: Reference number not provided

Study design
Longitudinal observational study

Primary study design
Observational

Study type(s)
Quality of life

Health condition(s) or problem(s) studied
Any eye disease causing bilateral vision impairment

Interventions
Participants will complete age-appropriate questionnaires to assess their mental health and wellbeing five times: before receiving sight restoration treatment, and 1, 3, 6 and 12 months after treatment. Before treatment and at the end of the study, participants will also complete a short qualitative interview.

Participants' parent(s)/carer(s) will also complete a questionnaire at each assessment and a short interview at the first and last assessment.

Intervention Type
Not Specified

Primary outcome(s)
Mental wellbeing assessed using the Warwick Edinburgh Mental Wellbeing Scale at pre-treatment, months 1, 3, 6 and 12

Key secondary outcome(s))
1. Participation assessed using the Child and Adolescent Scale of Participation at pre-treatment, months 1, 3, 6 and 12
2. Depression and anxiety assessed using the Revised Children’s Anxiety and Depression Scale at pre-treatment, months 1, 3, 6 and 12

3. Sleep assessed by parental completion of the Children's Sleep Habits Questionnaire at pre-treatment, months 1, 3, 6 and 12
4. Qualitative findings from participant and parent interviews at pre-treatment and month 12

Completion date
31/12/2027

Eligibility

Key inclusion criteria
1. Young people aged 10-20 years
2. Meeting the ICD-11 criterion of having mild, moderate or severe vision impairment, or blindness, in their better eye
3. Receiving treatment intended to improve their visual function
4. With sufficient English comprehension to understand the age-appropriate questionnaires

Participant type(s)
Patient, Carer

Healthy volunteers allowed
No

Age group
Mixed

Lower age limit
10 years

Upper age limit
20 years

Sex
All

Key exclusion criteria
Does not meet the inclusion criteria

Date of first enrolment
01/01/2026

Date of final enrolment
31/12/2026
