DOC

Study objectives

Cognitive behaviour therapy and self-examination therapy are both more effective in reducing depressive complaints than a waiting list control group.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Received from the local ethics committee (Medisch Ethische Toetingscommissie of the VUMC) on the 7th September 2007 (ref: 2006/168).

Study design

Randomised, parallel group, controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Depressive symptoms

Interventions

The cognitive-behavioural intervention is called Color your life (Kleur je leven). This intervention consists of eight lessons (one lesson a week). Four weeks later, the ninth lesson takes place. The intervention focuses on increasing pleasurable activities, increasing social skills and decreasing dysfunctional cognitions.

Self examination therapy is based on problem solving therapy. We use the Dutch version, called 'Alles onder controle'. This intervention takes five weeks. During this intervention participants determine what matters to them, think less negatively about things that do not matter to them, invest their energy in things that are important to them (by using problem-solving strategies) and accept situations they cannot change.

Both interventions are computer-based.

Primary outcome(s)

Depressive symptom level will be measured with the Center for Epidemiological Studies Depression Scale (CES-D).

Key secondary outcome(s)

1. Quality of life is measured by the Euroqol Questionnaire
2. Anxiety symptoms are measured by the anxiety subscale of the Hospital Anxiety and Depression Scale (HADS)
3. Dysfunctional cognitions are measured by the Dysfunctional Attitude Scale (DAS)
4. Worrying is measured by the Penn State Worry Questionnaire (PSWQ)
5. Problem solving skills are measured by the Social Problem Solving Skills-Revised (SPSI-R)
6. Mastery is measured by the Mastery Scale
7. Absence at work and use of healthcare are measured by the Trimbos/iMTA questionnaire for Costs associated with Psychiatric Illness (TIC-P)

Completion date

01/10/2007

Eligibility**Key inclusion criteria**

Score of 16 or higher on the Center for Epidemiological Studies Depression scale (CES-D).

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

Does not comply with the above inclusion criteria

Date of first enrolment

01/10/2006

Date of final enrolment

01/10/2007

Locations**Countries of recruitment**

Netherlands
