Plain English summary of protocol

Background and study aims

There is a growing interest for in-store interventions that can nudge people to purchase healthier foods, but a lack of data about their real-world effectiveness, especially over the medium term. The study aims to assess the ability of three point-of-sale interventions in grocery stores to improve the nutritional quality of food purchases.

Who can participate?

Anyone shopping at one of the participating grocery stores.

What does the study involve?

Grocery shopping at the participating stores, before and during the intervention. A few participants will be invited to answer an online survey about their perceptions and healthy eating intentions.

What are the possible benefits and risks of participating?

There are no foreseeable risks or benefits for the participants.

Where is the study run from?

The study is running in supermarkets and hypermarkets in the region of Lyon, France.

When is the study starting and how long is it expected to run for?

May 2019 to June 2020

Who is funding the study?

Institut Européen d'Administration des Affaires (European Institute of Business Administration, INSEAD), France

Who is the main contact?

Study information

Scientific Title

Grocery store interventions to improve the nutritional quality of food purchases in a field setting. A controlled before and after real-life study

Acronym

CHLF

Study objectives

The three interventions will improve the nutritional quality of the foods purchased in the test grocery stores and will increase intentions to engage in healthier eating.

Ethics approval required

Volunteer

Interventions

A total of five conditions are tested:

1. A group of stores with shopping carts with specially-designed posters placed in the front part of the cart to nudge consumers to reach the Public Health France recommendations for daily fruit and vegetable consumption
2. A group of stores with specific end-of-aisle displays promoting fruits & vegetables or foods with good nutritional profiles (with an A or B Nutriscore or at least a better Nutriscore than the average of their category), accompanied or not by promotional offers like temporary price reductions
3. A group of stores with specific checkout lines including an assortment of food with a good nutritional profile
4. Stores with all three interventions
5. There will be also a group of control stores with similar clientele and sales as the group of test stores and without any intervention.

Participants are regular shoppers at the participating grocery stores. The retailer will communicate anonymized purchase data for shoppers who have a loyalty card and scan it at the time they are making their purchases. All the shoppers will be informed of the intervention in the participating stores. All loyalty card holders have consented to have their data analyzed by the retailer. A random sample of loyalty card holders shopping in the participating stores will also receive an invitation to fill out a survey. This survey will collect data about their awareness of the intervention, their evaluation of it, and their intentions to engage in healthy eating behaviors. Participation in the survey is voluntary and not compensated.

Intervention Type

Behavioural

Primary outcome measure

Nutritional quality of the basket of supermarket food purchases:

1. Quantity of fruits and vegetables purchased, and
2. Quantity-weighted nutrition quality of their basket of purchases, measured using the Ofcom /FSA nutrient profile

At baseline (before the intervention), and at the following time points: 31/08/2019, 31/12/2019 and 30/06/2020.

Secondary outcome measures

Consumers awareness and behavioral intentions to engage in healthier behaviors measured using an online questionnaire sent to the loyalty cardholders at baseline and at the following times: 15/06/2019, 15/10/2019, 15/02/2020, 15/06/2020.

Overall study start date

21/02/2019

Completion date

30/06/2020

Reason abandoned (if study stopped)

Stopped due to the Covid-19 pandemic

Eligibility

Key inclusion criteria

1. Customers enrolled in the loyalty program of the test and control grocery stores of the participating retailer

Participant type(s)

Other

Age group

Adult

Sex

Both

Target number of participants

100000

Key exclusion criteria

1. No data will be collected on the purchases of minors

Date of first enrolment

Results and Publications

Publication and dissemination plan

The results of the study will be targeted for publication in academic journals. Progress reports about the implementation of the study and its evaluation by consumers will be released as the study progresses.

Intention to publish date

30/06/2021

Individual participant data (IPD) sharing plan

The datasets generated during and/or analysed during the current study are not expected to be made available due to their proprietary nature and potential commercial use.

IPD sharing plan summary

Not expected to be made available
