Study information

Scientific Title

Prevention of psychological problems in older widowed persons by means of a visiting service: A randomized trial

Study objectives

Contact with fellow-sufferers, as offered by visiting services to widowed persons with little social support, would show superior effects in improving mental health, quality of life and reducing financial costs to society, compared by a control condition

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Psychological problems

Interventions

Experimental: visiting service. In the visiting service, recently widowed persons are offered to hold supportive one-to-one talks with trained fellow-sufferers. The objective is to provide social support. The volunteers make maximally 10 home visits, spread out over a one-year period. Control condition: respondents in the control condition are offered a brochure about the prevention of depression. These respondents are free to seek help elsewhere on their own initiative.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. Mental health
2. Cost-effectiveness

Key secondary outcome(s))

1. Quality of life
2. Grief process
3. Mastery of condition
4. Loneliness

Completion date

01/05/2007

Eligibility

Key inclusion criteria

1. Widow/widower
2. Aged 55 years or older
3. Has lost his/her partner through death 6-12 months earlier
4. Feels lonely according to the 'Loneliness Scale'
5. No mental disorder according to the MINI

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Total final enrolment

216

Key exclusion criteria

When not met the five inclusion criteria mentioned above, people are excluded.

Date of first enrolment

01/11/2002

Date of final enrolment

01/05/2007
