SAD

Study objectives

A stepped care program in primary care for patients with depressive and/or anxiety disorders is more effective than care as usual.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approval received from the Medical Ethics Review Committee of the VU Medical Centre on the 1st February 2007 (ref: 06/248).

Study design

Randomised, controlled, parallel group multicentre trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Depressive disorders, Anxiety disorders

Interventions

In the current study a stepped care program will be developed for primary care patients with anxiety and/or depression. A stepped care program is characterised by different steps of treatment that are arranged in order of increasing intensity. After each step, the patient will be monitored, to determine if symptoms have been sufficiently reduced. The program consists of evidence based interventions: 1. Watchful waiting

- 2. Bibliotherapy
- 3. Problem solving treatment
- 4. Medication and/or an evidence based treatment in specialised mental health care

The control condition is care as usual.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Speed of recovery in terms of symptom reduction (Quick Inventory of Depressive Symptomatology [QIDS] for depression, and the Hospital Anxiety and Depression Scale [HADS-A] for anxiety) at baseline and after eight, 16 and 24 weeks.

Key secondary outcome(s))

At baseline and after eight, 16 and 24 weeks:

- 1. DSM diagnosis (Composite International Diagnostic Interview [CIDI])
- 2. Quality of life (Short Form health survey [SF36] and Euroqol questionnaire)
- 3. The use of health care services (Trimbos/iMTA questionnaire for Costs associated with Psychiatric Illness [TIC-P])
- 4. The use of medication (TIC-P)
- 5. Productivity losses (TIC-P)
- 6. Satisfaction with delivered care/continuity of care (Quote)

Completion date

01/09/2010

Eligibility

Key inclusion criteria

They are recruited through screening (all patients who visited their General Practitioner [GP]). They have to meet the following criteria:

- 1. Between 18 to 65 years
- 2. A Diagnostic and Statistical Manual of mental disorders (DSM) diagnosis of minor depression, major depression, dysthymia, panic disorder (with or without agoraphobia), generalised anxiety disorder, or social phobia. Patients with minor anxiety (not fulfilling any DSM criteria of an anxiety disorder) will also be included

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Sex

Not Specified

Key exclusion criteria

- 1. Have psychotic or bipolar symptoms
- 2. Have a high suicide risk
- 3. Are currently under treatment or received treatment for depression/anxiety in the past twelve months
- 4. Cannot read or write Dutch sufficiently enough to complete the questionnaires
