## Additional identifiers

Protocol serial number MREC/02/2/34

# Study information

Scientific Title

## **Acronym**

**NET** 

## **Study objectives**

To determine whether primary peritoneal drainage improves the survival and outcome of ELBW infants with perforated necrotising enterocolitis (NEC) or with isolated intestinal perforation.

## Ethics approval required

Old ethics approval format

## Ethics approval(s)

This project has been approved by an independent research ethics committee.

## Study design

Randomised controlled trial

## Primary study design

Interventional

## Study type(s)

Treatment

## Health condition(s) or problem(s) studied

Necrotising enterocolitis or isolated intestinal perforation

#### **Interventions**

Primary peritoneal drain or laparotomy.

#### Intervention Type

Other

#### Phase

**Not Specified** 

#### Primary outcome(s)

Survival at 1 and 6 months after randomisation.

## Key secondary outcome(s))

- 1. Time to death (days)
- 2. Cause of death (related to abdominal sepsis/not related to abdomen [cardiac anomaly/cerebral haemorrhage/other])
- 3. Hospital stay for survivors and non survivors (days)
- 4. Intestinal absorptive function. This will be assessed by measuring:
- 4.1. The calorie intake (kcal/kg/day) both enterally and parenterally 1 month and 6 months after randomisation
- 4.2. The weight gain at 1 month and 6 months after randomisation
- 4.3. The duration of parenteral nutrition (days)
- 4.4. The time to full enteral feeding (days)
- 5. Long term intestinal complications:

- 5.1. Intestinal stricture (confirmed by a contrast study and/or histology)
- 5.2. Persistent entero-cutaneous fistula
- 6. Intraventricular haemorrhage (ultrasound scan of the brain at enrolment in the trial and 2 weeks after randomisation); intraventricular haemorrhages will be graded (grade I to IV) according to their extent and severity
- 7. Respiratory function. This will be assessed by assessing the need for assisted ventilation or oxygen dependency at 1 and 6 months after randomisation.

## Completion date

20/03/2006

## **Eligibility**

## Key inclusion criteria

Extremely low birth weight (ELBW) infants (weight less than or equal to 1000g) with perforated necrotising enterocolitis or isolated perforation.

## Participant type(s)

Patient

## Healthy volunteers allowed

No

## Age group

Neonate

#### Sex

All

## Key exclusion criteria

- 1. Bilateral grade 4 intraventricular haemorrhages
- 2. Previous laparotomy
- 3. Previous peritoneal drain
- 4. Recurrent NEC

#### Date of first enrolment

01/11/2002

#### Date of final enrolment

20/03/2006

## Locations

#### Countries of recruitment
