# Study information

## Scientific Title

### Study objectives

To evaluate whether administration of opiates in the form of morphine produces a reduction in cough frequency and severity in patients with previously unsuccessfully treated cough.

### Ethics approval required

Old ethics approval format

### Ethics approval(s)

Not provided at time of registration

### Study design

Randomised double blind placebo controlled parallel group trial

### Primary study design

Interventional

### Secondary study design

Randomised controlled trial

### Study setting(s)

Not specified

### Study type(s)

Not Specified

## Participant information sheet

### Health condition(s) or problem(s) studied

Chronic cough

### Interventions

A randomised double-blind placebo-controlled study

### Intervention Type

Other

### Phase

Not Specified

### Primary outcome measure

Not provided at time of registration

**Secondary outcome measures**

Not provided at time of registration

**Overall study start date**

16/12/2003

**Completion date**

31/03/2005

## **Eligibility**

**Key inclusion criteria**

30 subjects from Hull Cough Clinic

**Participant type(s)**

Patient

**Age group**

Not Specified

**Sex**

Not Specified

**Target number of participants**

30

**Key exclusion criteria**

Does not match inclusion criteria

**Date of first enrolment**

16/12/2003

**Date of final enrolment**

31/03/2005

## **Locations**

**Countries of recruitment**

England

United Kingdom

**Study participating centre**

**Academic Department of Medicine**

Cottingham

United Kingdom
