Study information

Scientific Title

Study objectives

An intervention will reduce the incidence of depression and improve the symptoms of depression following hip fracture.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Depression in orthopaedic patients

Interventions

Cognitive behaviour therapy (CBT) for prevention and nurse intervention for treatment versus no intervention

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Rates of depression.

Key secondary outcome(s))

Functional outcome.

Completion date

01/06/2005

Eligibility

Key inclusion criteria

People over the age of 60 who have fractured their hip.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Senior

Sex

All

Key exclusion criteria

People who do not satisfy the inclusion criteria.

Date of first enrolment

01/01/2004

Date of final enrolment

01/06/2005

Locations

Countries of recruitment

United Kingdom

England
