Study information

Scientific Title

Study objectives

To evaluate the pain patients experience during cataract surgery with three different types of local anaesthesia, using two types of pain questionnaires (McGill pain questionnaire and visual analogue scale).

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Surgery: Cataract

Interventions

A randomised, controlled trial comparing three types of anaesthesia: peribulbar, sub-tenon and topical.

Intervention Type

Procedure/Surgery

Phase

Not Specified

Primary outcome(s)

Quality of pain control through cataract surgery with different types of anaesthetic. Assessment of pain the patients have with anaesthetic administration.

Key secondary outcome(s))

Not provided at time of registration

Completion date

01/10/2006

Eligibility

Key inclusion criteria

Not provided at time of registration
