Study information

Scientific Title
A comparison of three methods for securing and dressing epidural catheters used for epidural infusion analgesia (EIA)

Study objectives
Is there a system of securing and dressing an epidural catheter for epidural infusion analgesia that is more efficacious than current practice?

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Hospital

Study type(s)
Treatment

Participant information sheet

Health condition(s) or problem(s) studied
Signs and Symptoms: Pain

Interventions
System of securing and dressing an epidural catheter for epidural infusion analgesia vs current practice

Intervention Type
Other

Phase
Not Applicable

Primary outcome measure

Ease of operator use, system adhesive and aseptic integrity, patient comfort measured using a 5-point Likert scale.

Secondary outcome measures
Not provided at time of registration

Overall study start date
11/07/2001

Completion date
14/01/2002

Eligibility

Key inclusion criteria
Not provided at time of registration

Participant type(s)
Patient

Age group
Not Specified

Sex
Not Specified

Target number of participants
Total number of subjects = 180

Key exclusion criteria
Not provided at time of registration

Date of first enrolment
11/07/2001

Date of final enrolment
14/01/2002
