# Study information

Scientific Title

Hyperbaric oxygen treatment of chronic refractory radiation proctitis: a randomized and controlled double-blind crossover trial with long-term follow-up

#### Acronym

**HORTIS - III** 

#### **Study objectives**

The principle objective of this research is to more precisely determine the degree of benefit that hyperbaric oxygen therapy affords in the treatment of late radiation tissue injury.

The study has eight components. Seven involve evaluation of established radionecrosis at varying anatomic sites (mandible, larynx, skin, bladder, rectum, colon, and gynecology [GYN]). The eighth will investigate the potential of hyperbaric oxygen therapy to prophylax against late radiation tissue injury. This third study HORTIS-III will focus on patients with radiation cystitis.

This study will also generate more precise "Benchmarking" data as to the complications associated with hyperbaric exposure, including incidence and degree of morbidity.

Overview of the study can be found at: http://www.baromedicalresearch.org/pdf/HORTIS\_Overview.pdf

All HORTIS trials that have been registered with ISRCTN can be found at: http://www.controlled-trials.com/isrctn/search.html?srch=HORTIS&sort=3&dir=desc&max=10

## Ethics approval required

Old ethics approval format

## Ethics approval(s)

The study was approved by the Palmetto Health, Richland IRB in 2002 (ref: 2002-17).

# Study design

Double-blind randomised placebo-controlled multi-centre trial, with cross-over option

# Primary study design

Interventional

# Study type(s)

Treatment

# Health condition(s) or problem(s) studied

Radiation cystitis

#### Interventions

Patients will be initially randomized to receive either oxygen at 2.0 atmospheres absolute (ATA), or air at 1.0 ATA.

The therapeutic algorithm is personalized to each patient's degree of response at specific points during their course of hyperbaric exposure. The total number of exposures will vary from between 20 and 40.

Following a 30-day observation/"wash out" period, the allocation assignment will be opened. Patients randomized to the 1.0 ATA air group will be offered the opportunity to cross-over to the 2.0 ATA oxygen arm. The offer is mandatory, not so the requirement of the patient to cross-over. A therapeutic algorithm identical to the first randomization will be undertaken during any subsequent cross-over phase.

#### Intervention Type

Other

#### **Phase**

**Not Specified** 

#### Primary outcome(s)

The following will be assessed at pre-treatment, 3 and 6 months, 1, 2, 3, 4 and 5 years post-treatment:

- 1. Subjective Objective Signs Management and Analysis/Late Effect of Normal Tissue (SOMA /LENT) scores
- 2. Clinical evaluation

## Key secondary outcome(s))

Quality of Life, assessed by the Expanded Prostate Cancer Index Composite (EPIC) questionnaire at pre-treatment, 3 and 6 months, 1, 2, 3, 4 and 5 years post-treatment.

#### Completion date

21/07/2012

# Reason abandoned (if study stopped)

Lack of funding/sponsorship

# **Eligibility**

#### Key inclusion criteria

- 1. Both males and females between the ages of 18 and 70 years
- 2. Patients whose cancer treatment included radiotherapy and who have developed late radiation tissue injury, manifesting as one or more of the diagnostic criteria listed below:
- 2.1. Endarteritis
- 2.2. Hypocellularity
- 2.3. Hypovascularity
- 2.4. Vascular congestion
- 2.5. Haemorrhage
- 2.6. Necrosis
- 2.7. Oedema
- 2.8. Telangiectasis
- 2.9. Urgency
- 2.10. Pain
- 2.11. Fistula
- 2.12. Erythema
- 2.13. Contracted bladder

- 2.14. Dysplasia
- 2.15. Vascularity ulceration
- 2.16. Tissue hypoxia

#### Participant type(s)

Patient

#### Healthy volunteers allowed

No

#### Age group

Adult

## Lower age limit

18 years

#### Sex

All

#### Key exclusion criteria

- 1. Reactive airway disease
- 2. Radiographic evidence of pulmonary blebs or bullae
- 3. Untreated pneumothorax
- 4. Previously documented ejection fraction less than 35%
- 5. History of seizures (except childhood febrile seizures)
- 6. Cardiovascular instability
- 7. Mechanical ventilator support
- 8. Unable to follow simple commands
- 9. Not orientated to person, place, time
- 10. Participating as a subject in any other medical or biomedical research project (if previously involved as a subject, sufficient time must have elapsed to permit "wash out" of any investigational agent)

#### Date of first enrolment

21/07/2003

#### Date of final enrolment

21/07/2012
