Secondary identifying numbers

# Study information

#### Scientific Title

The WinFood Intervention Study: the effects of improved complementary foods on nutrition and health among Cambodian infants and children, a randomised, single-blind study

#### Acronym

WinFood

#### **Study objectives**

Improved complementary foods based on locally available traditional ingredients will improve the nutritional and health status of Cambodian infants and children

#### Ethics approval required

Old ethics approval format

#### Ethics approval(s)

National Ethics Committee for Health Research (NECHR), Cambodia, 22/10/2010, ref: Version No 1 dated 28-05-2010

#### Study design

Randomised single-blind study

#### Primary study design

Interventional

#### Secondary study design

Randomised controlled trial

#### Study setting(s)

Other

#### Study type(s)

Quality of life

#### Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

#### Health condition(s) or problem(s) studied

Infants at risk of undernutrition

#### **Interventions**

Four different pre-cooked complementary food supplements given as a porridge daily from 6-15 months of age (6-8 months: 50 q, 9-12 months: 75 q, 13-15 months: 125 g)

- 1. WinFood CF: rice and two highly-nutritious fish and one spider species
- 2. WinFood Light: rice and a common fish species plus vitamin-mineral premix
- 3. Corn-Soy-Blend Plus (CSB+)

4. Corn-Soy-Blend Plus Plus (CSB++).

Food class (1 & 2) are the experimental and food class (3 & 4) are the control interventions

#### Intervention Type

Other

#### Phase

Not Applicable

#### Primary outcome measure

Changes in fat-free body mass (deuterium dilution) and iron status (serum ferritin and transferrin receptors) from baseline (age 6 months) until the end of the 9 month intervention

#### Secondary outcome measures

Changes in:

- 1. Ponderal and linear growth
- 2. Physical activity (using an accelerometer, actigraph)
- 3. Motor milestones (questionnaire, clinic visits)
- 4. Morbidity
- 5. Haemoglobin concentration (using Haemocue)
- 6. Serum concentrations of acute phase proteins [C-reactive protein (CRP) and a-acid glycoprotein(AGP)], insulin-like growth factor (IGF)-1 and zinc
- 7. Whole blood fatty acid composition

Measured from baseline (age 6 months) until the end of the 9 month intervention

#### Overall study start date

07/03/2011

#### Completion date

10/02/2012

# **Eligibility**

#### Key inclusion criteria

Children who are 6 months old and have a weight-for-height z-score > -3

#### Participant type(s)

Patient

#### Age group

Child

#### Lower age limit

6 Months

#### Sex

Both

#### Target number of participants

#### Key exclusion criteria

- 1. Weight-for-height z-score < -3
- 2. Bilateral pitting oedema
- 3. Haemoglobin (Hb) < 80 g/L
- 4. Clinical signs of vitamin A deficiency (xerosis or Bitot spots). These children will be referred for treatment.

#### Date of first enrolment

07/03/2011

#### Date of final enrolment

10/02/2012
