Study information

Scientific Title

The impact of high nutrient dense Ready to Use Complementary Food (RUCF) on growth of children below 2 years in South Kivu, Eastern Democratic Republic of Congo: a randomised controlled interventional trial

Acronym

S-RUCF

Study objectives

This study will test the hypothesis that the use of a specially designed fortified spread (a specific Ready to Use Complementary Food [RUCF]) containing 500 kcal per 100 g as a complementary food for 12 months (from 6 months to 18 months of age) will reduce the incidence and prevalence of underweight and stunting.

Ethics approval required

Old ethics approval format

Ethics approval(s)

1. Ethics Committee of the Free University of Brussels approved on the 10th March 2009 (ref: P2009/060/B40620095963)
2. Ethics Committee of the Centre de Recherche of Science Naturelles (CRSN) approved on the 28th September 2008

Health condition(s) or problem(s) studied

Underweight/stunting

Interventions

Intervention group: infants enrolled in the intervention group will receive 50 g of RUCF providing 250 kcal/day during 12 months (from the age of 6 to 18 months). The RUCF will be administered daily by the mother. Extension health workers serving the villages of participating children will visit the couples mother-infant biweekly.

Control group: Infants enrolled in the control group will receive 1 kg of UNIMIX flour per week. The porridge offered to infant should provide 250 kcal/day.

Intervention Type

Other

Phase

Not Applicable

Primary outcome measure

Prevalence of stunting at 12, 18 and 24 months of age.

Secondary outcome measures

1. Average daily breast milk intake at 6 and 9 months of age
2. Prevalence of exclusive breast feeding at 6 months of age
3. Mean change in anthropometric indices at 12, 18 and 24 months of age
4. Risks factors of stunting at 12 months of age
5. Incidence of diarrhoea at 12 months of age
6. Incidence of malaria at 12 months of age
7. Incidence of severe acute malnutrition at 12, 18 and 24 months of age
8. Proportion of children standing independently at 9 and 12 months of age
9. Proportion of children walking unassisted at 12 months of age
10. Mean cholesterol at 12 and 18 months of age
11. Mean triglycerides at 12 and 18 months of age
12. Mean haemoglobin at 12, 18 and 24 months of age

Overall study start date

15/11/2009

Completion date

30/12/2011

Eligibility**Key inclusion criteria**

1. Full term born infants (gestational age greater than 37 weeks and birth weight greater than 2500 g)
2. Consent given

Participant type(s)

Patient

Age group

Child

Sex

Both

Target number of participants

677 infants per group (total: 1354 infants)

Key exclusion criteria

1. Bottle-fed children
2. Children with any malformations or neurological impairment

Date of first enrolment

15/11/2009

Date of final enrolment

30/12/2011

Locations

Countries of recruitment

Belgium

Congo, Democratic Republic

Study participating centre

Fond Tasnier 6

Genval
