Study information

Scientific Title

Study objectives

Whether a prescribed course of relapse prevention therapy (RPT), based on Marlatts model, may have a statistically significant higher knowledge score post-group; whether there will be a significant reduction of inpatient bed nights and whether there will be a statistically significant degree of contact maintenance with helping services by comparison with the comparison group?

Health condition(s) or problem(s) studied

Mental and Behavioural Disorders: Schizophrenia

Interventions

For the experimental group, there will be a semi structured interview questionnaire at pre and post relapse prevention therapy (RPT) and at 5 weeks follow up. For the control group, there will be a semi structured questionnaire to be completed at the same time as that of the experimental group and afterwards at 3 months interval to ensure matching time intervals. In addition there will be a demographic characteristic form to complete on ever participant.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Relapse prevention skills and knowledge, reduction of in-patient hospitalisation and an improvement in maintaining contact with helping services.

Secondary outcome measures

Not provided at time of registration

Overall study start date

08/07/2002

Completion date

16/06/2003

Reason abandoned (if study stopped)

Lack of staff/facilities/resources

Eligibility

Key inclusion criteria

Patients with a primary diagnosis of schizophrenia (International Statistical Classification of Diseases and Related Health Problems - tenth revision [ICD10] = F20-29)

Participant type(s)

Patient

Age group

Not Specified

Sex
