Study objectives

The Four Habits Model describes the four patterns of behaviour used by clinicians during medical interviews (Frankel and Stein, 2001). Hypothesis: A 20-hour intensive course in effective clinical communication according to the "Four Habits" approach will significantly alter the communication skills of participating physicians.

Frankel and Stein, Getting the most out of the clinical encounter: the four habits model, J Med Pract Manage, 2001 Jan-Feb;16(4):184-91

Clinical communication

Interventions

Participating physicians are given a 20-hour intensive course in clinical communication using the "Four habits" approach. 40 physicians will attend the training course in June 2007, and the other 40 physicians will attend the course in January 2008. For all physicians, two consultations /meetings will be recorded before the June course, four consultations/meetings will be recorded between the June and the January courses, and two consultations/meetings will be recorded after the January course for evaluation.

Primary outcome(s)

The videotaped consultations/meetings were assessed using the Four Habits Coding Scheme (Krupat et al, 2006).

Krupat E, Frankel R, Stein T, Irish J. The Four Habits Coding Scheme: validation of an instrument to assess clinicians communication behavior. Pat Educ Couns 2006; 62: 38-45.

Key secondary outcome(s))

- 1. Change in Habit 1 through 4 behaviours according to which habit the physicians particularly commit themselves to improve (physicians may want to implement all habits, but are prompted to give priority to one of them)
- 2. Changes in Habits in 20% of physicians with the lowest scores
- 3. Changes in Habits across age groups, gender, specialties, seniors/juniors
- 4. Change in physician communication specific self-efficacy
- 5. Change in patient satisfaction

Completion date

31/03/2010

Eligibility

Key inclusion criteria

Physicians under 60 years doing full or part-time clinical work in somatic departments of Akershus University Hospital. Altogether 8 real consultations or meetings with patients/relatives of patients per physician are recruited consecutively.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

ΔII

Key exclusion criteria

None for physicians.

For consultations:

- 1. Anticipated consultation duration less than 5 minutes
- 2. Consultations or meetings with patients or relatives where they are in a particularly vulnerable situation and where videotaping would be inappropriate (e.g. when conveying serious messages)
