Study information

Scientific Title

A single dose two-phase crossover study to assess the tolerability and pharmacokinetic parameters of a fixed dose formulation of artesunate-mefloquine and standard dose artesunate and mefloquine as loose tablets in healthy normal volunteers (Thailand)

Study objectives

Not provided at time of registration

Ethics approval required

Old ethics approval format

Ethics approval(s)

Received from the local medical ethics committee on 27/05/2005

Study design

Single dose two-phase crossover study

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Pharmacokinetics of drug

Interventions

Two tablets of fixed dose artesunate and mefloquine, given once: total dose = AS 200mg, MQ 400 mg.

Loose tablets - 200 mg of artesunate (4 tablets) and 500 mg of mefloquine (2 tablets).

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Artesunate, mefloquine

Primary outcome(s)

Not provided at time of registration

Key secondary outcome(s))

Not provided at time of registration

Completion date

Eligibility

Key inclusion criteria

- 1. Age 18 to 50 years
- 2. Written consent given after reading the volunteer information leaflet. Participation must be voluntary and volunteers will be fully informed of possible side effects. They will be informed that they are free to withdraw at any time
- 3. No significant abnormal findings on history or examination, particularly no prior liver disease, cardiovascular disease (including arrythmias), peripheral neuropathy, convulsions, and psychiatric disease
- 4. No clinically significant abnormalities on:
- 4.1. Haematology:
- 4.1.1. Haemoglobin: male 13.6 17.5 g/dl, female 12 15.5 g/dl
- 4.1.2. Total white cell count: 4 10 x 10^3/ul
- 4.1.3. Platelet counts: 150 450 x 10^3/ul
- 4.2. Liver:
- 4.2.1. Total bilirubin less than 1.2 mg/dl
- 4.2.2. Serum Glutamic Oxaloacetic Transaminase (SGOT) less than or equal to 35 IU/l
- 4.2.3. Serum Glutamic Pyruvic Transaminase (SGPT) less than or equal to 35 IU/l
- 4.3. Renal function:
- 4.3.1. Creatinine 50 100 umol/l
- 4.3.2. Blood urea nitrogen 8 20 mg/dl
- 5. Negative pregnancy test (women) using the urine beta Human Chorionic Gonadotropin (βHCG)
- 6. Normal electrocardiogram (physicians reading: running at 50 mm/sec)
- 7. No history of antimalarial ingestion (chloroquine, amodiaquine, quinine, halofantrine, pyrimethamine-sulfadoxine) in the preceding two months, and for mefloquine, preceding three months
- 8. No other drugs or medications, including over-the counter preparations, ingested in the preceding week
- 9. Adequate venous access
- 10. Not participating in another clinical trial

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Sex

Αll

Key exclusion criteria

- 1. Refusal of consent
- 2. Clinically significant physical signs detected by the examining physician
- 3. Abnormal electrocardiogram detected by the examining physician
- 4. Presence of hepatic, renal and gastrointestinal disorders
- 5. Smokers (greater than 10 cigarettes/day), abuse of alcohol or recreational drugs
- 6. Presence of malaria parasites on a thick smear
- 7. Subjects having been in a malarial area in the preceding eight weeks
- 8. Subjects having ingested drugs in the preceding week
- 9. Presence of acute or chronic infections
- 10. Allergy to study drugs

Date of first enrolment 25/02/2005

Date of final enrolment 25/02/2006
