RABAGAST 2010

Study information

Scientific Title
An observational prospective follow-up study of radial artery coronary bypass grafting in North Norway

Acronym
RABAGAST

Study objectives

1. Radial artery is better than vein as coronary bypass grafts
2. Arterial grafts induce less native disease progression than vein grafts

Ethics approval required

Old ethics approval format

Ethics approval(s)

Study design

Observational prospective follow-up cohort study

Primary study design

Observational

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Coronary artery disease

Interventions

The treatment is coronary artery bypass grafting. All patients received radial artery grafts, most also received internal mammary artery and saphenous vein grafts. Planned follow-up is at least 10 years.

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

1. Survival
2. Graft patency
3. Disease progression

Outcomes will be measured at approximately 10 years after the index operation.

Key secondary outcome(s)

1. Recurrent angina
2. Infarction
3. Endothelial function

Outcomes will be measured at approximately 10 years after the index operation.

Completion date

31/12/2011

Eligibility

Key inclusion criteria

1. Coronary artery bypass graft (CABG) operation with radial grafts at our institution Apr 4 2001 - Oct 7 2003
2. Participants were aged from 40 - 78 years, either sex

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Total final enrolment

119

Key exclusion criteria

Angiography contraindicated

Date of first enrolment

01/09/2010

Date of final enrolment

31/12/2011
