Study information

Scientific Title

A randomised controlled cluster trial comparing the effectiveness and cost effectiveness of a school based cognitive behaviour therapy programme (FRIENDS) in the reduction of anxiety and improvement in mood in children aged 9/10 years

Acronym

PACES

Study objectives

Group based cognitive behaviour therapy (FRIENDS) delivered by trained school and health staff is effective and cost effective in preventing anxiety and improving mood compared to usual school lessons (Personal, Social and Health Education [PSHE]).

Ethics approval required

Old ethics approval format

Ethics approval(s)

The University of Bath, School Research Ethics Approval Panel, 28/07/2010, ref: PACES/SREAP

Study design Randomised controlled cluster trial

Primary study design Interventional

Secondary study design

Cluster randomised trial

Study setting(s) School

Participant information sheet

Not available in web format, please use contact details to request a patient information sheet

Health condition(s) or problem(s) studied

Anxiety

Interventions

Schools will be randomised to one of three treatment groups:

1. Health-led FRIENDS: The intervention will be delivered by trained and supervised health professionals (e.g. school nurses, psychology assistants) external to the school.

2. School-led FRIENDS: The intervention will be delivered by trained and supervised members of the school teaching group.

FRIENDS involves ten, 60-minute weekly sessions of cognitive behaviour therapy. Intervention teaches children practical skills to identify their feelings; to learn to relax; to identify unhelpful thoughts and to replace them with more helpful thoughts; and how to face and overcome their problems and challenges.

3. Treatment as Usual: Children will participate in the usual personal social and health education (PSHE) lessons provided by the school. These lessons will be planned and led by the class teacher. A standardised record sheet will be used to summarise the content of each session so that any potential overlap with the active intervention can be determined.

Intervention Type

Behavioural

Primary outcome measure

1. Children: Children's Anxiety Scale

2. Parents and teachers: Strength and Difficulties Questionnaire Used to assess changes in anxiety and symptoms of low mood at baseline, 6 and 12 months.

Secondary outcome measures

- 1. Children: Children's Anxiety Scale, used to assess changes in self esteem and bullying
- 2. Parents and teachers: Strength and Difficulties Questionnaire

All assessments will be undertaken at baseline, 6 and 12 months.

Overall study start date

01/01/2011

Completion date

31/12/2013

Eligibility

Key inclusion criteria

All children aged 9 - 10 years (years 4 and 5) attending study schools (n = 54) and participating in PSHE lessons

Participant type(s) Patient

Age group Child

Lower age limit 9 Years

Upper age limit 10 Years

Sex Both

Target number of participants 1080 children attending 54 schools

Key exclusion criteria

None. There will be some occasions when children do not participate in PSHE for religious or other reasons. These will be respected but it is expected that these will be limited.

Date of first enrolment 01/01/2011

Date of final enrolment 31/12/2013
