Study information

Scientific Title

Study objectives

1. To investigate the association between strict glycaemic control and the subsequent development of nosocomial infection.
2. To determine the relationship between nosocomial pneumonia and the presence of glucose in endotracheal secretion.

Ethics approval required

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Infections and Infestations: Nosocomial infections

Interventions

All ventilated patients will be randomised to 2 groups:

Group 1 - the treatment group: a continuous infusion of insulin will be started once blood glucose levels exceed 6.1 mmol/l and adjusted accordingly to maintain blood sugar levels between 4.4 and 6.1 mmol/l

Group 2 - the control group: insulin will be adjusted to maintain blood glucose levels ≤ 10 mmol/l

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Nosocomial infection.

Key secondary outcome(s)

Not provided at time of registration

Completion date

01/05/2005

Eligibility
