## Additional identifiers

**Protocol serial number**  
N0190155442

## Study information

**Scientific Title**

### Study objectives

To compare outcome in terms of intervention rate, complication rate and cosmesis for sheet graft vs. 1:1 meshed graft

**Ethics approval required**

Old ethics approval format

**Ethics approval(s)**

Not provided at time of registration

**Study design**

Randomised controlled trial

**Primary study design**

Interventional

**Study type(s)**

Not Specified

**Health condition(s) or problem(s) studied**

Injury, Occupational Diseases, Poisoning: Burns

**Interventions**

Sheet grafts vs 1:1 mesh grafts.

**Intervention Type**

Other

**Phase**

Not Specified

**Primary outcome(s)**

1. Complication rates
2. Scar control
3. Patient and PT visual assessment using Vancouver scale.

**Key secondary outcome(s)**

Not provided at time of registration

**Completion date**

01/06/2006

**Eligibility****Key inclusion criteria**

All patients aged above 16 years of age undergoing a split skin grafting procedure that would be suitable for either sheet or 1:1 mesh (currently used interchangeably)

**Participant type(s)**

Patient

**Healthy volunteers allowed**

No

**Age group**

Adult

**Sex**

Not Specified

**Key exclusion criteria**

Those who cannot understand the principles of the study or are incapable of making judgments; those on steroids, those who have conditions which impair healing, those with burn areas greater than 20% and those whom it will not be possible to follow up.

**Date of first enrolment**

01/06/2005

**Date of final enrolment**

01/06/2006

**Locations****Countries of recruitment**

United Kingdom

England

**Study participating centre**
