Study information

Scientific Title

Acronym

OPFUS

Study objectives

The aim of the study was to evaluate open access as a means of following-up patients with chronic, relapsing, inflammatory bowel disease. The study sought to establish the clinical impact and cost effectiveness of open access follow-up in outpatients of patients with chronic disease, using inflammatory bowel disease as the exemplar.

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Inflammatory bowel disease

Interventions

1. Open access follow-up in outpatients
2. Standard care

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

1. Generic (36-item Short Form Health Survey [SF-36]) and disease-specific (UK Inflammatory Bowel Disease Questionnaire [UKIBDQ]) quality of life measured at six-monthly intervals for two years
2. Number of primary and secondary care contacts
3. Total resource use
4. Views of patients and general practitioners (GPs)

Key secondary outcome(s)

No secondary outcome measures

Completion date

01/07/1999

Eligibility

Key inclusion criteria

180 adult patients (78 Crohn's disease, 77 ulcerative or indeterminate colitis, 25 ulcerative or idiopathic proctitis recruited from outpatient clinics between October 1995 and November 1996:

1. Aged over 18 years, either sex
2. Inactive or mildly active but stable inflammatory bowel disease

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Sex

All

Key exclusion criteria

1. Active disease requiring treatment
2. Stoma
3. Other disease which required regular follow up
4. Unable to comply with data collection

Date of first enrolment

01/04/1995

Date of final enrolment

01/07/1999
