Study information

Scientific Title

Study objectives

Nocturnal haemodialysis and conventional three times per week haemodialysis will not differ with respect to progression of LV mass (measured using Cardiac Magnetic Resonance [CMR]) at 6 months.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Participant information sheet

Health condition(s) or problem(s) studied

End-stage kidney disease

Interventions

Subjects are randomised to nocturnal haemodialysis or conventional three times per week haemodialysis (controls).

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Change in left ventricular mass (measured by CMR) at 6 months.

Secondary outcome measures

- 1. Mean change in systolic Blood Pressure (BP)
- 2. Change in HRQOL (Health-Related Quality-Of-Life)
- 3. Mean change in Haematocrit (Hct)/Erythropoietin (Epo) ratio
- 4. Mean change in calcium phosphorus product

Overall study start date

01/08/2004

Completion date

30/06/2006

Eligibility

Key inclusion criteria

All adult haemodialysis patients in Alberta, Canada are eligible.

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

38 subjects

Key exclusion criteria

Patients who are unable to perform NHD due to physical or mental incapacity.

Date of first enrolment

01/08/2004

Date of final enrolment

30/06/2006
