Study information

Scientific Title

Study hypothesis

To discover which treatment modality (MUA or DA) is the most beneficial for patients who are diagnosed with frozen shoulder

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Not Specified

Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

Condition

Musculoskeletal Diseases: Frozen shoulder

Interventions

Manipulation Under Anaesthetic (MUA) vs Distension Arthrogram (DA)

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Validated questionnaires contain simple shoulder score and Euroquol

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/05/2002

Overall study end date

01/02/2006

Eligibility

Participant inclusion criteria

Frozen shoulder patients, half modified to severe FR.SH.II. Not improving.

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

Not provided at time of registration

Participant exclusion criteria

Not provided at time of registration

Recruitment start date

01/05/2002

Recruitment end date

01/02/2006

Locations

Countries of recruitment

England

United Kingdom

Study participating centre

University Hospitals of Leicester
Leicester

United Kingdom
LE1 4PW
