Study information

Scientific Title

A double blind, randomised, placebo controlled, cross-over study to investigate the biokinetics and effects of a blackcurrant juice on endothelial function

Study objectives

Consumption of 250 ml of a 20% blackcurrant juice drink provides phytochemicals that are absorbed and improve endothelial function in an acute study

Ethics approval required Old ethics approval format

Ethics approval(s) The Research Ethics Committee of the University of Reading approved on the 12th of July 2007 (ref: Project 07/26)

Study design Randomised double blind placebo controlled crossover acute meal study

Primary study design Interventional

Secondary study design Randomised controlled trial

Study setting(s) Other

Study type(s) Quality of life

Participant information sheet

Not available in web format, please use contact details below to request a patient information sheet

Health condition(s) or problem(s) studied

Absorption of phytochemicals and effects on endothelial function

Interventions

One dose of 250 ml of a 20% blackcurrant juice drink in comparison with a control drink lacking flavonoids. The washout period between the intervention and control dose was 1 month.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Endothelial function/vascular reactivity assessed by laser doppler iontophoresis at 0 and 120 minutes.

Secondary outcome measures

Phytochemical composition (phenolic acids and flavonoids) of plasma and urine was measured at 0.5 hour intervals for the first 4 hours, then 1 hour intervals up to 8 hours. A 24 hour urine sample was also analysed.

Overall study start date

04/12/2007

Completion date 05/06/2008

Eligibility

Key inclusion criteria

1. Men and women between the ages of 30-70 years

2. Normal weight

3. Drink no more than 15 units of alcohol (i.e. not more than 7 pints) per week

4. Not regularly undertaking vigorous exercise or fitness training (i.e. not more than 3, 20 minute aerobic sessions per week)

Participant type(s)

Patient

Age group Adult

Sex

Both

Target number of participants 20

Key exclusion criteria

- 1. Diabetes
- 2. Heart disease
- 3. Gall bladder problems
- 4. Phenylketonuria (PKU)
- 5. Known food allergies or intolerances or abnormalities of fat metabolism
- 6. Trying to lose weight or following other diets
- 7. Taking dietary supplements
- 8. Hormone abnormalities or liver disease

Regularly use certain types of medication
Pregnant, lactating or, if female and of reproductive age, not using a reliable form of contraception (including abstinence)

Date of first enrolment 04/12/2007

Date of final enrolment 05/06/2008
